Fleet Folders

"The private mapped drive for your entire fleet."

Drop files into a Windows folder ashore. Delivered reliably to every ship at sea.

No bounced email attachments, no cloud sync disasters, and **zero office software training.**

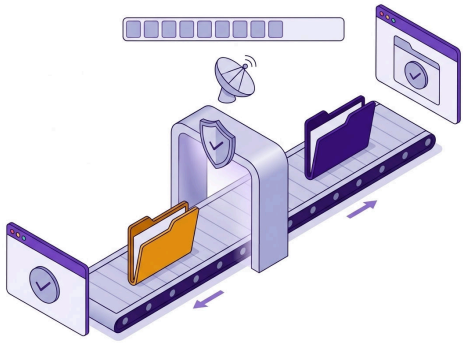

Why cloud sync fails at sea

- Large email attachments bounce, clog ship inboxes, and cause version chaos.
- Dropbox & OneDrive restart interrupted transfers from zero—burning satellite data.
- Two-way sync lets one accidental delete wipe out critical fleet records.

One mapped drive. Zero drops.

- Shore staff drag and drop files right in Windows Explorer (Z:\).
- Interrupted satellite transfers auto-resume at the exact byte.
- Separate ToShip & FromShip lanes prevent accidental overwrites.

Native Windows Explorer
Zero Office Training

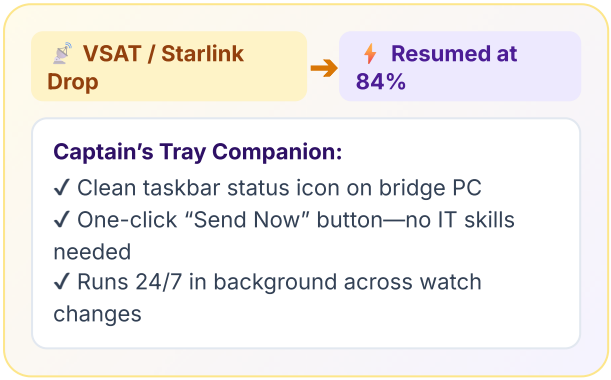

Exact Byte
Auto-Resumes Across
Satellite Dropouts

100% Scanned
Pre-Delivery Malware
& Virus Screening

Controlled & cyber-safe

- Ships cannot delete office records; office staff cannot wipe vessel folders.
- Every file is **scanned for malware** before ship or shore can open it.
- Automatic **delivery receipts** prove when safety manuals land onboard.

Zero surprise satellite bills

- Smart bandwidth pacing for VSAT, Starlink, Iridium, and 4G/5G port links.
- File size caps stop accidental gigabyte uploads from stalling noon reports.
- Simple taskbar companion lets captains verify transfers at a glance.

Built for every role in your fleet

Dead-simple file exchange from the bridge to the shore office

Captains & Masters
Simple inbox/outbox with zero IT headaches

Superintendents
Noon reports & certificates always on time

Chief Engineers
Manuals & spare requisitions without bounces

Maritime IT & DPA
Malware screening & audit delivery proof

THE 2-VESSEL SATELLITE CHALLENGE

Give us your worst satellite link.
Put your fleet on one drive.

Pick your two most problematic vessels. We'll map your office drive and get FleetFolders running in 30 minutes.

1. Map Z:\ Drive → 2. Connect 2 Ships → 3. Transfer Files
